DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,3,21,35-37, 39, 41-43 are rejected under 35 U.S.C. 102(b) as being anticipated by Willmann (U. S. Patent no. 5,044,70).

See figure, brake operating member 1, brake master cylinder 7, brake cylinder 25,26,29,30, sensing device (stroke detector 39,40 wheel speed sensors 35), assisting device 4,8, control provided by ECU 36, reservoir 48, pressure source 46, solenoid valves 49,54,58,60.

Claim Rejections - 35 USC § 103

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

4. Claims 38 and 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Willmann in view of Schramm et al.

Willmann is relied upon as above. Willmann does not disclose redundant sensors to detect pedal operation. Schramm et al teaches redundant sensors to detect pedal operation. It would have been obvious to one of ordinary skill in the art at the time the

Art Unit: 3683

invention was made to use redundant sensors to detect pedal operation as taught by Schramm et al in the system of Willmann in order to provide a more reliable system.

Response to Arguments

5. Applicant's arguments with respect to claims 1,3,21,35-43 have been considered but are moot in view of the new ground(s) of rejection.
